

# HOW MUCH IS YOUR CUSTOMER'S COMFORT WORTH?

## THE OTHER GUYS

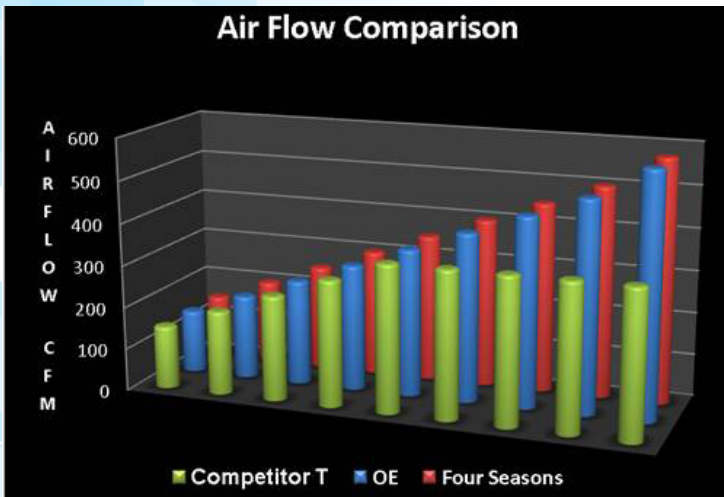

## FOUR SEASONS® COMFORT

All Blower Motors are **not** created equal. Many low cost, no name competitors skip a few key steps in their haste to get to market quicker and cheaper, but not Four Seasons®! Fitting in the housing and blowing air is not a high enough standard to effectively cool and heat today's SUVs and Crossovers with larger interiors. They may even look identical, but don't be fooled by a clone.

Every Four Seasons® blower motor is qualified by passing a battery of tests that includes the critically important airflow test in our on-site air flow chamber. Meeting or exceeding the O.E. airflow performance and specification is the key to your customer's comfort.

Airflow measured in CFM (Cubic Feet per Minute)  
Testing supplied by Unimotor, LTD.

Choose a high quality Four Seasons® blower motor that you know will pass the test because saving a few dollars on a repair invoice isn't worth the risk.

PRODUCT LEADERSHIP THROUGH INNOVATION
